

QUESTIONS 15 / 48 completed

Pos-Neg

POS-NEG

Write a program to read in an integer and determine if it is positive, negative, or zero.

PROGRAM EDITOR

C++

Run

Save

```
1 #include <iostream>
2 using namespace std;
3
4 int main() {
5     long long n;
6     cin >> n;
7
8     if (n > 0) cout << "Positive";
9     else if (n < 0) cout << "Negative";
10    else cout << "Zero";
11
12    return 0;
13 }
```

QUESTIONS 15 / 48 completed

Vow-Cons

VOW-CONS

Write a program to read in a character and determine if it is a vowel or a consonant.

PROGRAM EDITOR

C++

Run

Save

```

1 #include <iostream>
2 #include <cctype>
3 using namespace std;
4
5 int main() {
6     char ch;
7     cin >> ch;
8
9     char c = tolower(static_cast<unsigned char>(ch));
10    if (c >= 'a' && c <= 'z') {
11        if (c=='a' || c=='e' || c=='i' || c=='o' || c=='u')
12            cout << "Vowel";
13        else
14            cout << "Consonant";
15    } else {
16        cout << "Not a letter";
17    }
18    return 0;
19 }

```

QUESTIONS 15 / 48 completed

Greater

GREATER

Write a program to read in two integers and use the conditional operator to determine which number is greater.

PROGRAM EDITOR

C++

Run

Save

```
1 #include <iostream>
2 using namespace std;
3
4 int main() {
5     int a, b;
6     cin >> a >> b;
7     cout << (a > b ? a : b);
8     return 0;
9 }
```

QUESTIONS 15 / 48 completed

Swap

SWAP

Write a program to read in two integers and swap their values using the bitwise XOR operator.

PROGRAM EDITOR

C++

Run

Save

```
1 #include <iostream>
2 using namespace std;
3
4 int main() {
5     long long a, b;
6     cin >> a >> b;
7
8     if (a != b) {
9         a = a ^ b;
10        b = a ^ b;
11        a = a ^ b;
12    }
13
14    cout << a << " " << b;
15    return 0;
16 }
```

QUESTIONS 15 / 48 completed

Nearest

NEAREST

Write a program to read in a floating-point number and round it to the nearest integer using the floor and ceil functions.

PROGRAM EDITOR

C++

Run

Save

```
1 #include <iostream>
2 #include <cmath>
3 using namespace std;
4
5 int main() {
6     double x;
7     cin >> x;
8
9     double f = floor(x);
10    double c = ceil(x);
11
12    int ans = (x - f < c - x) ? (int)f : (int)c;
13    cout << ans;
14
15    return 0;
16 }
```

OUTPUT

0
